

Thermal Transfer Solutions

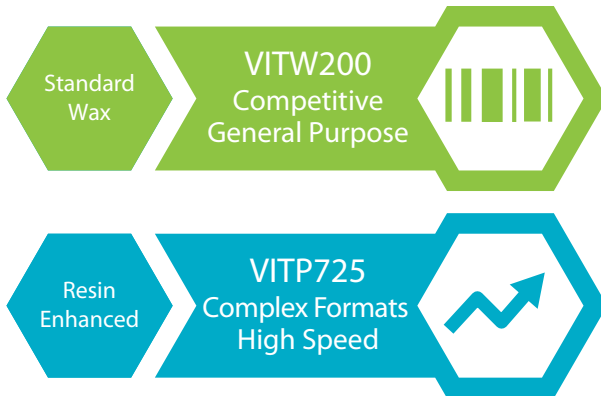

Logistics & Warehousing

Logistic labels are essential to an efficient supply chain. Barcodes must be high quality so they can be easily scanned to capture the data it contains. If the barcode doesn't scan, productivity slows as the operator must manually enter data. Common thermal transfer applications include shipping labels, inventory control labels, bin tags, print-and-apply labels, and warehouse location labels. Print formats can be very simple with normal barcodes to more complex, like a compliance label with rotated barcodes and heavy text.

Move Goods Through the Supply Chain

IIMAK Wax Thermal Transfer Ribbons

VITW200
Standard Wax

VITP725
Resin Enhanced Wax

Applications

- Compliance Labels
- Shipping Labels
- Shelf/Bin Tags
- Work in Process WIP
- Warehouse Location Labels
- Non-Conforming Material

Requirements

Short Term

High Quality
Print

Smudge
Resistance

Compatible

Label Stock

- Matte Coated Paper
- Floodcoat Paper
- Synthetic Paper
- Polypropylene / BOPP

Where

- Distribution
- Transportation
- Manufacturing
- Retail
