ASSET MANAGEMENT

NEW
RELEASE

This application will allow users to assign a barcode or RFID ID to Company assets and track them by site and location. The application will allow the user to track information about the asset for depreciation purposes. The application will also allow the user to track purchase cost, purchase invoice and valuation of the assets. Users can also configure the system to track asset information such as brand, make, model, serial number of the assets. The application can also be used to perform audit functions against tracked assets. Users can run reports and customize a dashboard related to their assets.

Tracking these assets will allow the user to know the physical location of their company assets as well as the value of these assets for depreciation purposes allowable by the current tax laws. Application features will also users to assign assets to sites / locations / departments and create categories of assets. Assets can be assigned to a person or a site / location. Assets can be checked out and back in again. Alerts can be set up to remind the users of expiring warranties, leases and maintenance that is due. Reporting is available to allow the user of the status of their assets. There are also audit functions to allow user to true-up their existing asset inventory. Users can track the donation and disposal of their assets. The application can track broken, lost and found assets.
